

Jan Lunze

Feedback Control of Large-Scale Systems

Reprint edition

with 74 figures and 26 examples

 Edition **MoRa**

Author:

Prof. Dr.-Ing. Jan Lunze

Ruhr-Universität Bochum

Lehrstuhl für Automatisierungstechnik und Prozessinformatik

44780 Bochum

Contents

Preface	ix
Symbols	xiii
Introduction	1
Aims and Structure of the Book	5
1 Large-Scale Control Systems	8
1.1 Main Problems and Basic Ideas	8
1.2 Decentralized Control	20
Bibliographical Notes	28
2 Results on Multivariable Feedback Systems	30
2.1 Models of Multivariable Systems	30
2.2 Controllability and Observability	33
2.3 Stability Analysis of Feedback Systems	39
2.4 Some Design Methods for Centralized Controllers	42
2.5 Structural Properties of Control Systems	47
2.6 Robustness of Feedback Systems	55
Bibliographical Notes	57
3 Models and Structure of Interconnected Systems	58
3.1 Subsystem and Overall System Models	58
3.2 Hierarchically Structured Systems	64
3.3 Decomposition into Disjoint Subsystems	76
3.4 Decomposition into Overlapping Subsystems	78
3.5 Multi-time-scale Systems	85
Bibliographical Notes	89
4 Decentralized Stabilizability	92
4.1 Decentralized Fixed Modes	92
4.2 Structurally Fixed Modes	106

4.3	Stabilizability and Pole Assignability by Decentralized Feedback	115
	Bibliographical Notes	118
5	The Decentralized Servomechanism Problem	120
5.1	The Centralized Servomechanism Problem	120
5.2	The Decentralized Servomechanism Problem	123
5.3	Servocontrollers for Polynomial Command and Disturbance Signals	131
	Bibliographical Notes	133
6	Decentralized Stabilization and Pole Assignment	135
6.1	Stabilization and Pole Assignment Through a Specific Channel	135
6.2	Decentralized Dynamic Compensation	140
6.3	Replacement of a Centralized State Feedback by a Decentralized Output Feedback	143
	Bibliographical Notes	156
7	Optimal Decentralized Control	158
7.1	The Optimization Problem	158
7.2	An Algorithm for Solving the Optimization Problem	162
7.3	Global Optimality of the Optimal Controllers of Isolated Subsystems	166
7.4	Decentralized Observers	172
	Bibliographical Notes	174
8	Stability Analysis of Interconnected Systems	177
8.1	The Composite-System Method for Stability Analysis	177
8.2	Stability Analysis with Scalar Lyapunov Functions	179
8.3	Stability Analysis with Vector Lyapunov Functions	183
8.4	Stability Analysis with Multidimensional Comparison Systems	188
8.5	Generalizations and Extensions	193
	Bibliographical Notes	204
9	Decentralized Control of Strongly Coupled Systems	206
9.1	Motivation and Information Structure of Decentralized Design	206
9.2	The Aggregation Decomposition Method	214
9.3	Suboptimal Decentralized Controllers	222

<i>Contents</i>	<i>vii</i>
9.4 Robust Decentralized Controllers	227
9.5 Decentralized Output Feedback	232
9.6 Extension to Overlapping Subsystems	233
Bibliographical Notes	236
10 Decentralized Control of Weakly Coupled Systems	240
10.1 Decentralized Control of Hierarchically Structured Systems	240
10.2 Decentralized Control of Multi-time-scale Systems	247
Bibliographical Notes	251
11 Decentralized PI Controllers	253
11.1 Existence of Robust Decentralized PI Controllers	253
11.2 Sequential Tuning of Decentralized PI Controllers	262
11.3 Decentralized Design of Decentralized PI Controllers	269
Bibliographical Notes	273
12 Strongly Coupled Symmetric Composite Systems	275
12.1 Models of Symmetric Composite Systems	275
12.2 Analysis of Symmetric Composite Systems	280
12.3 Decentralized Control of Symmetric Composite Systems	285
12.4 Stability Analysis of Systems that are Composed of Similar Subsystems	296
Bibliographical Notes	306
13 A Survey of the Results and Open Problems in Feedback Control of Large-scale Systems	309
Appendices	317
Appendix 1: Matrices	317
Appendix 2: Directed Graphs	324
References	327
Subject Index	341
