J. LUNZE: *Networked Control of Multi-Agent Systems*, Edition MoRa 2022

Figures that have been produced with MATLAB

28. Dezember 2021

The following table shows figures of the book, which have been produced with MATLAB (Version 2021a). The figure names have been derived from the name of the corresponding MATLAB script.

Figure	Caption	File name
3.3	Structure and consensus behaviour of the systems considered in Example 3.2	`ConsensusDemo1.eps`
3.6	Bounds for the trajectories of the systems with the same structure as in Fig. 3.3 (II)	`ConsensusDemo2.eps`
3.10	Consensus dynamics of the system $\overline{\Sigma}$ with complete couplings for $N = 40$ (top) and $N = 5$ (bottom)	`ConsensusDemo3.eps`
3.12	Behaviour of the systems with two leaders	`ConsensusDemo11.eps`
3.17	Formation control	`ConsensusDemo12.eps`
3.19	Results of the distributed estimation algorithm	`ConsensusDemo32.eps`
3.21	Discrete-time consensus	`ConsensusDemo17.eps`
3.24	Behaviour of the switching system with strongly connected, weight-balanced graphs	`ConsensusDemo4.eps`
3.25	Consensus behaviour of the same system with the same initial state but different switching functions (I)	`ConsensusDemo5.eps`
3.25	Consensus behaviour of the same system with the same initial state but different switching functions (II)	`ConsensusDemo6.eps`
3.27	Behaviour of the network with changing number of agents	`ConsensusDemo10.eps`
3.29	Consensus behaviour of the switching system	`ConsensusDemo20.eps`
4.2	Trajectories of synchronised oscillators	`SyncDemo18.eps`
4.6	Root locus of the agent	`SyncDemo3.eps`
4.7	Synchronisation behaviour of the harmonic oscillators	`Syncdemo4.eps`
4.8	Trajectories of two oscillators with different coupling structure	`SyncDemo5.eps`
4.13	Behaviour of the vehicle platoon ($N = 10$)	`SyncDemo13.eps`
4.25	Behaviour of three coupled oscillators with different coupling strength	`LCNetworkDemo3.eps`

4.26	Behaviour of an oscillator network with ten nodes	`LCNetworkDemo5.eps`
4.27	Eigenvalues of the oscillator networks with path structure	`LCNetworkDemo6.eps`
4.27	Eigenvalues of the oscillator networks with ring structure	`LCNetworkDemo7.eps`
4.39	Root loci of the closed-loop agent and the extended closed-loop agent	`SyncIMPDemo10.eps`
4.43	Command step response of the vehicle P_i with the velocity control loop with different masses	`SyncIMPDemo12.eps`
4.45	Behaviour of the platoon with neighbouring couplings	`SyncIMPDemo15.eps`
4.46	Robust synchronisation of three oscillators with increased coupling gain	`SyncIMPDemo17.eps`
4.47	Two oscillators with different eigenfrequencies $\omega_1 = 3$ and $\omega_2 = 2.5$ do not synchronise but constitute an asymptotically stable system	`Syncdemo21.eps`
4.48	Practical synchronisation of two coupled motors: The outputs follow the same sinusoidal trajectory with a small phase shift	`SyncMotor6.eps`
4.49	Trajectories of the three non-uniform oscillators and Lyapunov function	`LCNetworkDemo9.eps`
4.53	Synchronising behaviour of the two motors	`SyncMotor4.eps`
4.56	Behaviour of a single Kuramoto oscillator with $\omega_i = 1\,\frac{\text{rad}}{\text{s}}$, $\theta_{i0} = 2\,\text{rad}$ and $u_i(t) = 0$	`SyncKuramotoDemo1.eps`
4.57	Synchronisation of ten uniform Kuramoto oscillators with complete linear couplings ($\omega_i = 1\,\frac{\text{rad}}{\text{s}}$, $k = 0.03$)	`SyncKuramotoDemo2.eps`
4.58	Arrow representation of the synchronisation behaviour of Fig. 4.57	`SyncKuramotoDemo18.eps`
4.59	Phase-locking behaviour of ten non-uniform Kuramoto oscillators with complete linear couplings ($k = 0.1$)	`SyncKuramotoDemo3.eps`
4.59	Phase-locking behaviour of ten non-uniform Kuramoto oscillators with complete linear couplings ($k = 0.1$)	`SyncKuramotoDemo19.eps`
4.63	Asymptotic synchronisation of non-uniform Kuramoto oscillators	`SyncKuramotoDemo5.eps`
4.64	Behaviour of uniform Kuramoto oscillators with non-synchronisable phases	`SyncKuramotoDemo8.eps`
4.65	Behaviour of ten nonlinearly coupled non-uniform Kuramoto oscillators for two coupling strengths	`SyncKuramotoDemo7.eps`
4.66	Evaluation of the synchrony of the network behaviours shown in Figs. 4.63 and 4.65	`SyncKuramotoDemo9.eps`
4.67	Relation between the coupling strength k and the order parameter r_∞, which has been numerically determined for non-uniform oscillators with natural frequencies $\omega_i \in [2, 4]\,\frac{\text{rad}}{\text{s}}$ and all-to-all couplings	`SyncKuramotoDemo10.eps`
4.69	Equilibrium states	`SyncKuramotoDemo12.eps`

4.69	Synchronisation behaviour of the uniform oscillators with $\theta_{10} = 0$	`SyncKuramotoDemo11.eps`
4.70	Phase-locking of three non-uniform Kuramoto oscillators with initial phases (4.232)	`SyncKuramotoDemo13.eps`
4.71	Synchronisation of ten extended oscillators with nonlinear all-to-all couplings and coupling strength $k = 1.5$	`SyncKuramotoDemo14.eps`
4.71	Synchronisation of ten extended oscillators with nonlinear all-to-all couplings and coupling strength $k = 0.2$	`SyncKuramotoDemo15.eps`
4.72	Synchronisation of ten Kuramoto oscillators with nonlinear star couplings	`SyncKuramotoDemo16.eps`
4.73	Outputs of four oscillators (detail of Fig. 4.72)	`SyncKuramotoDemo17.eps`
5.4	Behaviour of the fifth agent	`DelayDemo7.eps`
5.14	Root locus	`DelayDemo3.eps`
5.14	Step response of the controlled robot	`DelayDemo4.eps`
5.15	Behaviour of the five robots with neighbouring couplings (top) and with the first communication graph of Fig. 5.12	`DelayDemo5.eps`
5.15	Behaviour of the five robots with two communication graphs of Fig. 5.12	`DelayDemo6.eps`
5.20	Vehicle outputs $y_1(t)$,..., $y_4(t)$ for sinusoidal input (top) and for step input (bottom)	`PlatoonDemo1.eps`
5.21	Details of the step responses $y_i(t)$ of $N = 50$ vehicles	`PlatoonDemo2.eps`
5.22	Velocities and vehicle distances in a braking manoeuvre	`PlatoonDemo3.eps`
5.22	Vehicle positions in a braking manoeuvre	`PlatoonDemo15.eps`
5.23	Velocities and vehicle distances for changing command signal $v_{\text{ref}}(t)$ of the leader (dashed line)	`PlatoonDemo4.eps`
5.28	Platoon behaviour with ACC (velocities $v_0, ..., v_5$; distances $d_1, ..., d_5$)	`PlatoonDemo11.eps`
5.30	Velocities and distances of the vehicles in a platoon with CACC	`PlatoonDemo10.eps`
5.30	Positions of the vehicles in a platoon with CACC	`PlatoonDemo12.eps`
5.31	Impulse responses belonging to the transfer functions (5.112), ($i = 2, ..., 5$)	`PlatoonDemo14.eps`
5.32	Platoon behaviour with CACC	`PlatoonDemo18.eps`
5.32	Platoon behaviour with ACC	`PlatoonDemo19.eps`
5.33	Comparison of the velocity $v_2(t)$ of the second follower (third curve from above) for CACC (top) and ACC (bottom)	`PlatoonDemo20.eps`

5.35	Impulse response and vehicle distance in a braking manoeuvre ...	`PlatoonDemo5.eps`
5.37	Impulse responses of the controlled vehicles ($\bar{g}$ —, $\bar{f}$ - - -)	`PlatoonDemo6.eps`
5.38	Impulse responses of the controlled vehicle for proportional distance controller	`PlatoonDemo7.eps`
5.39	Vehicle distances in a platoon with distance controllers	`PlatoonDemo24.eps`
6.3	Characteristic path length of the undirected path graph	`RegularGraphDemo3.eps`
6.7	Relative frequencies of the vertex degrees of the graph of Fig. 6.6 and Poisson degree distribution of a random graph	`RandomGraphDemo10.eps`
6.8	Comparison of an exponential probability distribution -o-o- with a power-law probability distribution -●-●-	`ScaleFreeDemo1.eps`
6.12	Characteristic number $\bar{s}$ of connected components and probability for the graph to be a single connected component	`RandomGraphDemo1.eps`
6.14	Disturbance behaviour of the electrical power network	`RandUQNet1.eps`
6.15	Degree distribution of a random graph with $N = 51$ vertices and connection probability $p = 0.2$	`RandomGraphDemo2.eps`
6.17	Diameter of random graphs	`RandomGraphDemo11.eps`
6.18	Characteristic path length of random graphs determined numerically for 600 realisations	`RandomGraphDemo3.eps`
6.23	Characteristic path length and clustering coefficient of small-world networks in dependence upon the re-connection probability p_r ...	`SmallWorldDemo1.eps`
6.26	Degree distribution of a scale-free network (only non-zero values are shown by the circles)	`ScaleFreeDemo5.eps`
7.2	Random sequences considered in Example 7.2	`ConvergenceDemo1.eps`
7.4	Probability distribution (7.12), outcome $\omega(k)$ of the experiment and the realisation of the sequence $\{X(k, \omega)\}$	`ConvergenceDemo7.eps`
7.8	Realisation of the random sequence (7.20)	`ConvergenceDemo2.eps`
7.12	Martingale	`ConvergenceDemo8.eps`
7.12	Supermartingale	`ConvergenceDemo9.eps`
7.15	Pendulum behaviour for the networked controller (—) compared with the behaviour for the controller with permanent data transfer (- - -)	`NetwPendulum1.eps`
7.16	Details of Fig. 7.15	`NetwPendulum2.eps`
7.17	Lyapunov function of the inverted pendulum	`NetwPendulum3.eps`
7.19	Random agreement	`RandomNetDemo6.eps`

7.21	Behaviour of a system with $N = 12$ agents and Erdös-Rényi communication graph with probability $p = 0.08$	`RandomNetDemo1.eps`
7.23	Number of edges in the communication graph	`RandomNetDemo2.eps`
8.5	Interval for the upper bound $\bar{v}$	`SelfOrgRobotDemo3.eps`
8.6	Performance of 21 robots with path connection (above) and with the effective communication graph (below)	`SelfOrgRobotDemo4.eps`
8.7	Delay of the robot formation in two experiments with the same connection probability $p = 0.1$ (I)	`SelfOrgRobotDemo5.eps`
8.7	Delay of the robot formation in two experiments with the same connection probability $p = 0.1$ (II)	`SelfOrgRobotDemo6.eps`
8.9	Probability of the edge $(i-1 \to i)$ to be an edge of the effective communication graph	`SelfOrgRobotDemo7.eps`
8.10	Expected path length v_i for various sizes M of the neighbourhood	`SelfOrgRobotDemo8.eps`
8.11	$\overline{\Delta v}$ in dependence upon the connection probability $p \in \{0.03, 0.1, 0.4\}$ and the size M of the neighbourhood	`SelfOrgRobotDemo9.eps`
8.12	Behaviour of the networked robots with the basic communication structure (above) and with the effective communication structure (below) ($y_i(t)$ is drawn for $i = 1, 6, 11, ..., 26$)	`SelfOrgRobotDemo11.eps`
8.13	Performance index of the networked robots	`SelfOrgRobotDemo10.eps`
8.18	Expected path length v_k for agents with the rank $k = 1, ..., 30$ with probability $p \in \{0, 0.03, 0.06, 0.1, 0.17, 0.4\}$	`SelfOrgRobotDemo12.eps`
8.19	Bound $\bar{v}$ of the expected path length	`SelfOrgRobotDemo13.eps`
8.21	Performance of the robots for two entry points of the leader marked by the filled dots (I)	`SelfOrgRobotDemo14.eps`
8.21	Performance of the robots for two entry points of the leader marked by the filled dots (II)	`SelfOrgRobotDemo15.eps`
8.27	Reconstruction of the disturbance effect on the output $y_3(t)$ of the third multirotor	`SelfOrgCopterDemo1.eps`
8.28	Effect of the disturbance $d_3(t)$ on the whole fleet with complete networked controller	`SelfOrgCopterDemo3.eps`
8.28	Effect of the disturbance $d_3(t)$ on the whole fleet with switching controller	`SelfOrgCopterDemo4.eps`
8.29	Effect of several disturbances on the multirotor fleet with non-switching controller	`SelfOrgCopterDemo6.eps`
8.29	Effect of several disturbances on the multirotor fleet with switching controller	`SelfOrgCopterDemo5.eps`
8.31	Three piecewise constant disturbances acting on neighbouring multirotors	`SelfOrgCopterDemo12.eps`
9.8	Behaviour of the pendulum with continuous state-feedback controller	`EventtriggeredPendulum1.eps`

9.8	Behaviour of the pendulum with continuous state-feedback controller	`EventtriggeredPendulum2.eps`
9.9	Pendulum with event-triggered control	`EventtriggeredPendulum3.eps`
9.9	Pendulum with event-triggered control	`EventtriggeredPendulum4.eps`
9.10	Pendulum behaviour for continuous control (- -) and for event-triggered control (—)	`EventtriggeredPendulum5.eps`
9.11	Disturbed pendulum: in the two time intervals marked an external disturbance occurs	`EventtriggeredPendulum7.eps`
9.11	Disturbed pendulum: in the two time intervals marked an external disturbance occurs	`EventtriggeredPendulum8.eps`
9.12	Behaviour of the event-triggered pendulum for a long time horizon	`EventtriggeredPendulum11.eps`
9.12	Behaviour of the event-triggered pendulum for a long time horizon	`EventtriggeredPendulum12.eps`
9.17	Event-triggered disturbance attenuation of the inverted pendulum without disturbance estimation	`EventtriggeredPendulum9.eps`
9.18	Pendulum behaviour with disturbance estimation	`EventtriggeredPendulum10.eps`
9.26	Behaviour of the overall system with event-triggered decentralised control	`VERADemo11.eps`
9.26	Behaviour of the overall system with event-triggered decentralised control	`VERADemo12.eps`
9.27	Coupling signals	`VERADemo13.eps`
9.28	Decentralised event-triggered control without approximate coupling signals (I)	`VERADemo14.eps`
9.28	Decentralised event-triggered control without approximate coupling signals (II)	`VERADemo15.eps`
9.33	Synchronisation by means of a continuous networked controller	`EventtriggeredSync2.eps`
9.34	Synchronisation by means of an event-triggered networked controller	`EventtriggeredSync3.eps`
A1.2	Behaviour of the systems with the graphs shown in Fig. 3.7	`ConsensusDemo9.eps`
A1.3	Behaviour of the system with feedback gain $k = 1$ (top), $k = 2$ (middle) and $k = 5$ (bottom)	`ConsensusDemo8.eps`
A1.4	Behaviour of the three systems	`ConsensusDemo7.eps`
A1.6	Consensus behaviour for the path graph (top) and the graph with additional edges (bottom)	`ConsensusDemo19.eps`
A1.9	Nyquist plot of the transfer functions (A1.11)	`ConsensusDemo30.eps`
A1.10	Comparison of the consensus behaviour of the system without delay (top) and with delay $\tau = 0.3$ (bottom)	`ConsensusDemo31.eps`

A1.11	Rendezvous of six robots	`ConsensusDemo28.eps`
A1.12	Robot positions at three time points	`ConsensusDemo29.eps`
A1.13	Behaviour of the robots with ring communication structure	`ConsensusDemo13.eps`
A1.13	Behaviour of the robots with ring communication structure	`ConsensusDemo14.eps`
A1.14	Behaviour of the robots with neighbouring couplings	`ConsensusDemo15.eps`
A1.14	Behaviour of the robots with neighbouring couplings	`ConsensusDemo16.eps`
A1.15	Load-balancing of multiprocessors	`ConsensusDemo18.eps`
A1.16	Result of the gossiping algorithm	`ConsensusDemo21.eps`
A1.20	Nyquist plot for the oscillator example	`SyncDemo14.eps`
A1.20	Nyquist plot for the oscillator example	`SyncDemo15.eps`
A1.22	Nyquist plot without and with time delay	`SyncDemo16.eps`
A1.23	Behaviour of the completely coupled network (top) and a network with path graph (bottom) with $N = 7$	`SyncDemo10.eps`
A1.24	Synchronisation behaviour of the platoon (top) and vehicle trajectories (bottom)	`SyncDemo17.eps`
A1.25	Platoon (top) and vehicle trajectories (bottom) for vehicles with ACC	`SyncDemo23.eps`
A1.26	Synchronisation behaviour of ten oscillators with complete couplings (top) and with path graph couplings (bottom)	`SyncDemo8.eps`
A1.27	Cluster synchronisation of seven harmonic oscillators	`SyncDemo19.eps`
A1.28	Root locus of the double integrator system	`SyncDemo9.eps`
A1.29	Behaviour of seven synchronised double-integrator agents	`SyncDemo11.eps`
A1.30	Synchronous behaviour of the spring-mass system	`SyncSpringMass1.eps`
A1.31	Oscillating movement of the spring-mass system (— y_1, u_1, - - - y_4, u_4)	`SyncSpringMass2.eps`
A1.32	Root locus of the agent model	`SyncSpringMass3.eps`
A1.32	Root locus of the extended model (A1.30)	`SyncSpringMass4.eps`
A1.33	Synchronous behaviour of the spring-mass system	`SyncSpringMass5.eps`
A1.34	Trajectories and Lyapunov function of an oscillator network with two oscillators	`LCNetworkDemo8.eps`

A1.35 Root locus of the oscillator ..... `SyncDemo1.eps`

A1.36 Synchronisation behaviour for $k = 0.1$ ..... `SyncDemo2.eps`

A1.37 Behaviour of a subsystem ..... `LCLCNetworkDemo1.eps`

A1.38 Root locus of the oscillator with respect to $(V_1(t), I_1(t))$ ..... `LCLCNetworkDemo2.eps`

A1.38 Root locus of the oscillator with respect to $(V_2(t), I_2(t))$ ..... `LCLCNetworkDemo5.eps`

A1.39 Behaviour of the two networks with $N = 10$ oscillators ..... `LCLCNetworkDemo4.eps`

A1.40 Root loci of the extended closed-loop agent in two scales ..... `SyncIMPDemo11.eps`

A1.42 Behaviour of the coupled oscillators for $\delta = 3.817$ ..... `SyncDemo20.eps`

A1.42 Change of the internal power for $\delta = 3.817$ ..... `SyncDemo22.eps`

A1.43 Behaviour of five robots without networked controller ..... `PhaseLockRobots1.eps`

A1.43 Behaviour of five robots with networked controller ..... `PhaseLockRobots2.eps`

A1.44 Practical synchronisation of five robots ..... `PhaseLockRobots3.eps`

A1.45 Stability region of the extended Kuramoto oscillator networks ... `SyncKuramotoDemo4.eps`

A1.46 Step responses of lag systems (5.46) with $T_1 = 1$ ..... `DelayDemo1.eps`

A1.47 Output $y(\Delta)$ for a second-order system (5.47) with $T_1 = 1$ and $T_2 \in [0, 5]$ ..... `DelayDemo2.eps`

A1.50 Step responses of the ten controlled vehicles (velocities in $\frac{\mathrm{m}}{\mathrm{s}}$) for $T_i \in [0.2, 1.3]$ ..... `PlatoonExercise8.eps`

A1.50 Step responses of the ten controlled vehicles (velocities in $\frac{\mathrm{m}}{\mathrm{s}}$) for $T_i \in [0.1, 0.5]$ ..... `PlatoonExercise11.eps`

A1.51 Velocities in $\frac{\mathrm{m}}{\mathrm{s}}$ and reduced distances in meters of the vehicles .. `PlatoonExercise9.eps`

A1.51 Velocities in $\frac{\mathrm{m}}{\mathrm{s}}$ and reduced distances in meters of the vehicles .. `PlatoonExercise12.eps`

A1.52 Position of the ten vehicles ..... `PlatoonExercise10.eps`

A1.54 Impulse responses of the controlled vehicle and vehicle distances for proportional distance and velocity controller ..... `PlatoonDemo9.eps`

A1.58 Impulse responses of the controlled vehicles ..... `PlatoonExercise1.eps`

A1.59 Behaviour of the string stable platoon with $N = 30$ vehicles ..... `PlatoonExercise4.eps`

A1.59 Behaviour of the string stable platoon with $N = 30$ vehicles ..... `PlatoonExercise5.eps`

A1.60 Behaviour of the platoon with guaranteed collision avoidance .... `PlatoonExercise6.eps`

A1.60 Behaviour of the platoon with guaranteed collision avoidance .... `PlatoonExercise7.eps`

A1.61 Vehicle velocities and distances in the platoon with CACC (5.117) `PlatoonDemo17.eps`

A1.63 Vehicle distances in the platoon with modified CACC ..... `PlatoonDemo21.eps`

A1.64 Collision avoidance test for the modified CACC ($i = 2, ..., 5$) ..... `PlatoonDemo23.eps`

A1.66 Equivalent resistance in dependence upon the probability p ..... `RandUQNet2.eps`

A1.67 Degree distribution of small-world networks ..... `SmallWorldDemo5.eps`

A1.67 Degree distribution of small-world networks ..... `SmallWorldDemo6.eps`

A1.67 Degree distribution of small-world networks ..... `SmallWorldDemo7.eps`

A1.67 Degree distribution of small-world networks ..... `SmallWorldDemo8.eps`

A1.68 Relative characteristic path length of a small-world network with 4 shortcuts ..... `SmallWorldDemo9.eps`

A1.69 Three parts of a convergent sequence ..... `ConvergenceDemo6.eps`

A1.70 Results of the distributed averaging algorithms for two different sequences of broadcast communications with the same initial state `RandomNetDemo4.eps`

A1.70 Results of the distributed averaging algorithms for two different sequences of broadcast communications with the same initial state `RandomNetDemo5.eps`

A1.71 Time-to-consensus in dependence upon the probability p of Erdös-Rényi graphs for the feedback gain $q = 0.3$, 0.5 and 0.8 ..... `RandomNetDemo3.eps`

A1.72 Gossiping with deterministic communication topologies ..... `ConsensusDemo22.eps`

A1.73 Gossiping with random communication ..... `ConsensusDemo24.eps`

A1.73 Gossiping with random communication ..... `ConsensusDemo25.eps`

A1.74 Gossiping with the communication to the next two followers ..... `ConsensusDemo26.eps`

A1.79 Disturbance behaviour of the multirotor fleet with switching P controller ..... `SelfOrgCopterDemo8.eps`

A1.79 Disturbance behaviour of the multirotor fleet with switching PI controller ..... `SelfOrgCopterDemo11.eps`

A1.80 Disturbance behaviour of the controlled multirotors ..... `SelfOrgCopterDemo9.eps`

A1.81 Disturbance effect on the multirotor with PI controller ..... `SelfOrgCopterDemo10.eps`

A1.82 Relation between $T_{\min}$ and $d_{\Delta\max}$ ..... `EventtriggeredDemo1.eps`

A1.83 Event-triggered synchronisation of six undamped oscillators ..... `EventtriggeredSync5.eps`

A1.84 Event-triggered synchronisation with path graph communication . `EventtriggeredSync6.eps`
